

GENERAL CHARACTERISTICS

Frigate: Stealth class

Length: 125 m

Beam: 15,4 m

Draft: 5,5 m

Displacement : 5.500 t

Speed : 25 kts

Propulsive power: 4 diesel engine
21,000 HP

OVERVIEW

"Aconit" is a poisonous plant that grows in the European and Central Asian mountains. Displaying dark green leaves and purple blue flowers, its upper petal looks like a helmet.

She inherits her name from one of the 9 FNFL corvettes entrusted by the British Admiralty to the France Libre, all named after flowers. FNFLS "Aconit" took part in the protection of Atlantic Convoys during the II World War. General de Gaulle declared that there would always be a ship named "Aconit" in the French Navy.
